Employment History

New Wine Digital

Utah, Remote

Jun 2021 - May 2026

Lead Web Developer

Led the development and launch of custom WordPress websites by transforming client mockups into responsive, production-ready websites. Managed and maintained a portfolio of 70+ client websites, providing ongoing updates, troubleshooting, and technical support. Diagnosed and resolved website, hosting, server, DNS, plugin, and performance-related issues to minimize downtime and improve reliability.

Project Experience

Radon Inspectors Platform

Web Developer
Wordpress + React

Built a WordPress-based membership platform for inspection professionals, enabling inspectors to sign up, register clients, and manage memberships. Developed a custom React.js dashboard for inspectors to manage client data and workflows, and implemented an automated email reminder system that notifies clients every two years for recurring inspections, improving retention and reducing manual follow-up.

Clinical Endpoint Experts

Web Developer
Wordpress

Built a highly customized WordPress website, featuring extensive custom development including multiple Custom Post Types (CPTs) with dedicated templates and functionality for content such as staff, events, white papers, news, info sheets, and solutions guides. The project utilized Sass for scalable and maintainable styling architecture and included integration with an external API for job listings. The platform was designed to support client's role as a clinical endpoint expert partnering with CROs, pharma, and biotech companies in global clinical trials, ensuring structured content management and a flexible, scalable publishing system. Content is updated weekly.

Educational eCommerce Platform

Web Developer
Wordpress + Woocommerce

Developed a custom WordPress eCommerce website for selling educational and training materials aimed at teachers and parents. Built and customized WooCommerce templates to support a catalog of 100+ products, including simple, variable, grouped, bundled, and complex product types, while ensuring a smooth user experience and scalable product management workflow.

Pet Nutrition Calculator

Web Developer
Wordpress + JavaScript +
PHP + WP REST API

Built a WordPress and Elementor-based informational website focused on pet nutrition products, featuring a custom JavaScript feeding calculator designed with a functional programming approach. The calculator processed complex formulas in real time to determine feeding amounts, product quantity, monthly cost, and duration based on pet data, with additional REST API and PHP integration to email personalized results directly to users.

Multi-Location Veterinary Dental Websites

Web Developer
Wordpress

Developed and maintained 20+ WordPress websites for veterinary dental offices across the United States, including both new site builds and migrations of existing domains across different hosting and DNS environments. Managed ongoing updates, SEO-focused blog content, event and booking systems using WordPress event management plugins, and long-term site monitoring and maintenance after launch.
